# **CWE User Experience Working Group Meeting**

**February 28, 2024** 

### **Agenda**

#### This meeting is being recorded :-)

- Purpose
- Housekeeping
- Primary topics
  - Prioritizing Corpus User Experience Modifications
  - Software Licensing Discussion (Continued)
- Reminders and Adjourn

### **UEWG: Purpose**

- Mission: Identifying areas where CWE content, rules, guidelines, and best practices must improve to better support stakeholder community, and work collaboratively to fix them
- Periodic reporting of activities to CWE Board
  - Next quarterly Board meeting TBD Q1-2024
- Please solicit participation from your contacts
  - Contact: cwe@mitre.org

### Housekeeping

- CWE UEWG March Meeting is cancelled
  - Spring break for the UEWG No March meeting due to VulnCon 2024!
    - Who from the UEWG is attending VulnCon?
- CWE (and related) VulnCon Talks/Discussions
  - The CWE Program: Current State and Road Ahead
  - Panel Discussion: Enabling Accurate, Decentralized Root Cause Mapping at Scale Confirmed
- The CWE Program is continuously seeking feedback on UEWG activities and priorities during these sessions or via email: <a href="mailto:cwe@mitre.org">cwe@mitre.org</a>

# **Topic 1**

# **Prioritizing Corpus User Experience Modifications** Alec Summers and Chris Coffin

## **Prioritizing User Experience Improvements**

- User Experience Working Group was established in response to negative feedback related to CWE's usability
  - This group has accomplished much in response (e.g., submission guidelines, mapping guidance, "New to CWE?" launch, weakness filtering)
  - We must now begin to address usability and understandability in further ways throughout the corpus structure and down to individual weakness language
- CWE entry clean-up (across the entire corpus)
  - Understandability: revising all entries for simpler language; remove redundancy
  - Simplifying descriptions/extended descriptions to leverage other elements appropriately
    - E.g., removing example instance, impacts, etc. language from descriptions
    - Only having one description written in concise, accurate language focusing on the weakness
  - Completeness: ensuring all entries have basic required elements populated
  - Visualizations: adding to entries to explain topics visually (leverage Abhi's top25 examples, build from there)

## **Usability: Macro- and Micro-Level**

#### Macro –

- How to organize weaknesses at structural, site-wide level?
  - Organizing Views
- Site-wide navigation

#### Micro –

- How to define a weakness understandably/accurately
- Remove redundant and unnecessary information
- Better leverage the schema

#### **CWE-89: Improper Neutralization of Special Elements used** in an SQL Command ('SQL Injection')

Weakness ID: 89

Abstraction: Base Structure: Simple

#### **▼** Description

The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component.

#### Extended Description

Without sufficient removal or quoting of SQL syntax in user-controllable inputs, the generated SOL guery can cause those inputs to be interpreted as SOL instead of ordinary user data. This can be used to alter query logic to bypass security checks, or to insert additional statements that modify the back-end database, possibly including execution of system commands.

SQL injection has become a common issue with database-driven web sites. The flaw is easily detected, and easily exploited, and as such, any site or product package with even a minimal user base is likely to be subject to an attempted attack of this kind. This flaw depends on the fact that SQL makes no real distinction between the control and data planes.

#### ▼ Relationships

#### ▼ Relevant to the view "Research Concepts" (CWE-1000)

Nature	Туре	ID	Name	
ChildOf	0	943	Improper Neutralization of Special Elements in Data Query Logic	
<u>ParentOf</u>	V	564	SQL Injection: Hibernate	
CanFollow	V	456	Missing Initialization of a Variable	

#### **CWE-89: Improper Neutralization of Special Elements used** in an SOL Command

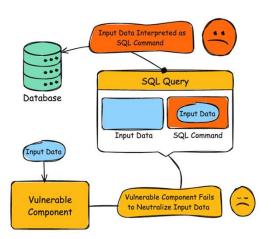

Weakness ID: 89

Usage for Mapping: ALLOWED (this CWE ID may be used to map to real-world vulnerabilities)

Abstraction: Base

#### **▼** Description

The product uses user-controllable input to construct an SQL command incorrectly or without neutralizing its special elements. This can cause inputs to be interpreted as SQL code instead of ordinary user data. This weakness depends on the fact that SQL makes no real distinction between the control and data planes.

#### **✓ Alternate Terms**

'SOL Injection'

**✓ Common Consequences** 

Scope **Impact Technical Impact:** Read Application Data Confidentiality A user could construct an SQL command to reveal sensitive information stored in a database

## **Prioritizing User Experience Improvements**

- To come: New Strategy and Implementation Plan for usability improvements across CWE corpus aligned to required elements and their requirements as outlined in CWE content suggestion guidelines
- Community partners in UEWG are invited to help us tackle this important work
  - More intentional focus in UEWG
  - CWE Content Web Submission Form for suggested mods on any weakness
  - Content Development Repository (CDR), GitHub repo for community collaboration is coming soon and will provide transparent, collaborative platform on which to work

# **Topic 2**

## **Software Licensing Discussion (Continued)**

Przemyslaw Roguski and Jonathan Hood

## **Recent Discussions on SW Licensing Issues**

- Since November, a resurrection of debate around SW licensing issues being in/out of CWE scope on the CWE-Research email listserv
- In 2018, it was determined that "improper licensing" was outside of CWE's scope
  - Rationale: Impact to software and its usage not through the technical exploitation of a software security weakness in architecture, design, or code. Rather, it is through policy/programmatic exploitation.
  - Availability concern comparable with supply chain issues where one disrupts a supplier to stop/limit a product from being delivered, and hence make it not available

#### **Recent arguments are varied:**

- Pro: Misusing SW licenses can negatively affect maintainability, availability
- Against: Invalid/Improper licenses cannot lead to a vulnerability
- Pro: CWE absorbed CQE content ~2018; improper licensing is a code quality issue
- Against: Licensing issues are not a property of SW, but of the society and economy around the SW

### **CWE Scope**

#### CWE's definition of "Weakness":

- A condition in a software, firmware, hardware, or service component that, under certain circumstances, could contribute to the introduction of vulnerabilities
- Community members sometimes suggest new entries to CWE that do not satisfy this "weakness" definition, but they want CWE to treat them as "weaknesses"
- Other times, people effectively suggest the expansion of CWE's scope beyond "traditional" software/hardware
- "Scope exclusions" attempt to formalize decisions about what can or cannot be included in CWE as an official "weakness" entry
  - Have already been used in external submissions

## Next Meeting – April 24 @ 12pm

### PLEASE CONTACT WITH ANY QUESTIONS OR THOUGHTS

**CWE@MITRE.ORG** 

# **Backups**

### **New to CWE – Additional Examples**

- The current New to CWE page has one example "CWE-798: Use of Hard-coded Credentials"
- More examples are needed
- Should be simple to understand to closely match the intended audience of the New to CWE page
- Examples for consideration?
  - Might focus on 2023 Top 25 CWEs?
  - CWE-434: Unrestricted Upload of File with Dangerous Type
  - CWE-287: Improper Authentication
  - Others?

#### **New to CWE**

Common Weakness Enumeration (CWE™) can be difficult to understand for the average person and can offers some tips on how to familiarize yourself with what CWE has to offer before more fully exploring the the CWE Program, you have come to the right place.

#### What is CWE?

First, we should describe what CWE is. CWE is a community-developed list of common software and har is a condition in a software, firmware, hardware, or service component that, under certain circumstance conditions are in many cases introduced by the developer during development of the product.

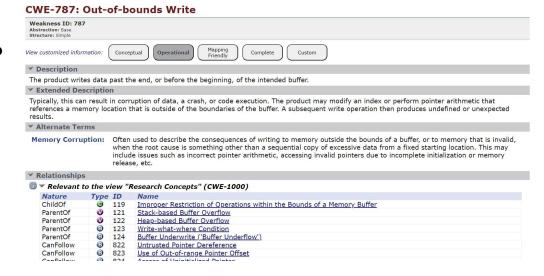

Even though developers may have vastly different coding practices, they are all capable of introducing t products. The CWE List and associated taxonomies and classification schemes serve as a language that

The best part is that CWE is free to use by any organization or individual for any research, development

### New to CWE – Additional Examples – Selection **Criteria (Continued)**

- What CWF characteristics are important when determining the best examples for new CWE users?
- Is the description easy to understand for a non-developer or industry expert?
- Does it include good examples (demonstrative and observed)?
- Is it a well-known/well-understood weakness?
- Does it exist in the Top 25 list (now or previous years)?
- Others?

### **New to CWE Series – Future Topics**

- The CWE team is considering developing additional documents as part of a "New to CWE" series
- Keep them short so that new and casual users can read quickly
- Each document would link to others in the series where appropriate
- Topics for consideration?
  - Categorization Views and Categories
  - How do I navigate the CWE corpus?
  - CWE Hierarchy Pillars, Classes, Bases, and Variants
  - Others?

#### New to CWE

Common Weakness Enumeration (CWE™) can be difficult to understand for the average person and can offers some tips on how to familiarize yourself with what CWE has to offer before more fully exploring the the CWE Program, you have come to the right place.

Even though developers may have vastly different coding practices, they are all capable of introducing t products. The CWE List and associated taxonomies and classification schemes serve as a language that

The best part is that CWE is free to use by any organization or individual for any research, development

## New to CWE Series – How to Navigate CWE

- The CVE -> CWE Mapping Guidance exists on the website today
- The Mapping Methodologies section of the guidance could be reused with some modification
  - Keyword search
  - Views
  - PDF Visualization
- The goal is to create a "New to CWE: How to Navigate CWE" document that could be referenced by the current "New to CWE" page that exists today

#### New to CWE

### **CWE Element/Information Presentation – Mockup for New CWE Users**

19

### **CWE Element/Information Presentation – Mockup for New CWE Users**

index or perform pointer arithmetic that references a memory location that is outside of the boundaries of the buffer. A subsequent read operation then produces undefined or unexpected results.

How does this Weakness relate to others?

#### **▼ Relationships**

■ Relevant to the view "Research Concepts" (CWE-1000)

Nature	Туре	ID	Name
ChildOf	0	119	Improper Restriction of Operations within the Bounds of a Memory Buffer
ParentOf	V	126	Buffer Over-read
ParentOf	V	127	Buffer Under-read
CanFollow	<b>B</b>	822	Untrusted Pointer Dereference
CanFollow	(3)	823	Use of Out-of-range Pointer Offset
CanFollow	(3)	824	Access of Uninitialized Pointer
CanFollow	(3)	825	Expired Pointer Dereference

■ Relevant to the view "Software Development" (CWE-699)

Nature	Type	ID	Name
MemberOf	C	1218	Memory Buffer Errors

- Pelevant to the view "Weaknesses for Simplified Mapping of Published Vulnerabilities" (CWE-1003)
- Relevant to the view "CISQ Quality Measures (2020)" (CWE-1305)
- Relevant to the view "CISQ Data Protection Measures" (CWE-1340)

#### Where can I get more information?

20

### **Grouping CWEs**

- CWE entries are currently "grouped" in different ways to provide useful subsets of the CWE corpus for different purposes:
  - Views: a subset of CWE entries that provides a way of examining CWE content. The two main view structures are Slices (flat lists) and Graphs (containing relationships between entries), examples include:
    - CWE-1194: Hardware Design
    - CWE-699: Software Development
    - CWE-1400: Comprehensive Categorization for Software Assurance Trends
    - CWE-1003: Weaknesses for Simplified Mapping of Published Vulnerabilities (NVD)
  - Categories: a CWE entry that contains a set of other entries that share a common characteristic. A category is not a weakness, but rather a structural item that helps users find weaknesses that share the stated common characteristic.
    - CWE-1199: General Circuit and Logic Design Concerns
  - ~ Overall Hierarchy
    - CWE-1000: Research Concepts contains all CWE entries in one hierarchical structure

### **Grouping CWEs, cont.**

- What groupings are most useful to new or casual CWE users? **Experienced users?**
- How can groupings be better presented/discovered/identified to the user?
- Should new users be guided to groupings of CWEs for learning about CWE? (e.g., links in user stories)
- Are there additional groupings that we are missing? Too many?

### **CSV Single Colon Separators Within Column Data**

- A double colon is used to separate csv fields/columns data, while a single colon is used to separate multi-value data within fields/columns
- The Observed Examples field contains Reference and link data that includes a url in some cases (colon within "http://...")
- Should a note be added to the download data that warns the user of this, or should we look into an alternative separator?
- Example taken from CWE CWE-41: Improper Resolution of Path Equivalence (4.12) (mitre.org)
  - ::REFERENCE:CVE-2000-1114:DESCRIPTION:Source code disclosure using trailing dot:LINK:https://www.cve.org/CVERecord?id=CVE-2000-1114::REFERENCE:CVE-2002-1986:DESCRIPTION:Source code disclosure using trailing

### **CWE User Pain Points**

- Pain point topics that the group is aware of or would like to discuss
- For those on the call, what were your biggest questions or concerns when beginning to use CWE?
- Are there common questions that CWE users have that are not covered in the current FAQ?
- Other potential opportunities:
  - Features we could expand or improve to make CWE consumption easier?
  - Maybe engage the community in one or more ways to solicit this kind of feedback (see topic #3)
- Other thoughts?

## **Community Engagement Strategy**

- Develop a strategy for engaging the CWE user community for feedback
- What are the best methods to query the community on topics such as the pain points covered in topic #2
- What communication methods should be employed?
  - E.g., polls, emails, web, social media
- Should we target specific user types?

Other thoughts?

## **CWE Video Tips Series**

#### Current video ideas:

- How to search CWE for a weakness
- How to display only the information that you need with presentation filters
- What is a weakness (vs a vulnerability)
- How are weaknesses organized
- What is a category (how is it different than a pillar)
- What are views
- How and why to use the research view
- Use cases for CWE (could user stories be used?)
- How do I submit an idea for a new weakness
- How can I improve the quality of existing weaknesses

### **New to CWE – Future Content**

- The New to CWE content audience is different from what has been catered to previously
- The audience is the casual or new user to CWE or even the manager who makes security funding decisions
- The team has previously drafted material for the New to CWE audience that covers the CWE hierarchy
  - Not yet released material
  - Do members agree that this topic should be covered for New to CWE?
- Are there other topics that UEWG members feel strongly about or believe should be covered given the intended audience?
- Should there be a close coupling of the topics covered here with the CWE Video Tips series?

## **CWE Naming and Vulnerability Mapping**

- Being thinking about solutions for common and well-known issues surrounding use of CWE names and how to more easily map vulnerabilities to CWEs
- Current CWE structure is difficult to understand and use
- Community needs better root cause information for vulnerabilities
- Does CWE naming need a change or update to support easier mapping?
  - Remove CWE names for Views and/or Categories?
  - New naming that embeds a structure (e.g., CWE-1234-1)
